FAMILY NEMONYCHIDAE

J. McNamara

This family comprises five species in Canada. The adults feed on the staminate flowers of various conifers.

The nemonychids are often included within the Curculionidae but their larvae show affinities to the Anthribidae. A revision of this family for North America was recently published (Kuschel 1989) and the Canadian species will be treated by Bright in a forthcoming publication scheduled for the Handbook series "The Insects and Arachnids of Canada". The list below follows O'Brien & Wibmer (1982).

BC (3); AB (2); MB (1); ON (2); PQ (2); NB (1)

Tribe Neocimberini

Genus NEOCIMBERIS O'Brien & Wibmer
