

FAMILY RHYSODIDAE
(Wrinkled bark-beetles)

Y. Bousquet

The family Rhysodidae includes only two species in Canada. The adults are cylindrical, elongate beetles resembling in habitus some species of the families Colydiidae or Cucujidae. Both adults and larvae live under bark of dead trees and in rotting wood.

The North American species were revised by Bell (1970).

BC (1); ON (1)

Genus OMOGLYMMIUS Ganglbauer

Key to species: Bell & Bell (1982)

(Subgenus BOREOGLYMMIUS Bell & Bell)
